🛡️ **Deskman**

Version 13 Features

Deskman is a program that helps you secure **Windows**, protecting workstations from tampering.

Designed to **greatly simplify** the security configuration of workstations.

Requires Windows 10, or later and a modern web browser

🛡 Desktop Security

Block access to desktop components: Desktop icons, Taskbar, the Start menu and much more.

🖱 Disable Mouse and Keys

Disable Ctrl+Alt+Del, the right mouse button and many other system keys and combinations.

🗀 File Explorer Security

Disable file renaming and deleting, disable access to menus and settings or block File Explorer completely.

🖥 Custom Start Menu

Build a secure Start menu, with only a few applications and commands, for easy access.

🔽 Application Filter

Apply software filters, blocking unwanted applications and stopping software installation.

🛡 Web Filter

Allow only a list of domains and IP addresses, wildcards allowed, and block everything else.

🗀 Folder Filter

Block access to all folders on File Explorer except for the ones you want, without using permissions.

▤ Strong System Policies

Make sure users do not change important settings by blocking access to settings, drives and system tools.

▢ Web Browser Protection

Protect web browser configuration by blocking access to settings and menus on Firefox, Chrome and Edge.

ⓘ Suspend Restrictions

Pause restrictions temporarily from the dashboard, locally or remotely, or by pressing a hotkey.

⌗ Network Sync

Configure your installations automatically, by syncing data between them, using groups to manage different configurations.

▥ Internal Logs

Keep track of everything around Deskman: blocked apps, filtered webs, user activity, configuration changes and usage warnings.

🛡 Security Logs

Monitor system security events, such as connected/disconnected external drives and installed/uninstalled applications.

⊡ Backups and Presets

Deskman is able to save weekly data backups to a folder, and allows you to manage multiple configurations.

⊘ Network Access

Deskman works via web, which means it can be accessed from any device (mobile or desktop) on your local network.

◉ Advanced Dashboard

The dashboard allows you to suspend restrictions, view logged users, restart the system, manage running processes and more.

⊗ User Permissions

Assign permissions to allow guest access to Deskman, based on your own requirements.

⊞ Two-Factor Authentication

Users are able to activate two-factor authentication on their accounts for increased security.

⌁ Works Offline

Deskman works on your network via web, but internet access is optional. Isolated workstations are supported.

⊚ Low Resource Usage

Deskman is fully optimized, with no external requirements, and very low cpu and memory consumption.

⊛ Easy to Use

Deskman is easy to use and fast to deploy, with a modern UI for desktop and mobile, and detailed documentation.

⊠ No Subscription Required

Licenses do not expire and do not require a subscription to work. Maintenance plans are available for support and upgrades.

⊡ 100% Private

Deskman is On-Premises software. It is not in the cloud, only you have access to your data.

🤝 Curated Security

Deskman provides Windows administrators with powerful restrictions, developed and tested by our team and refined after years of customer feedback.

🏢 Enterprise & GMP

Deskman includes advanced logs for auditing, no auto-updates, automatic data backups, user permissions and it's used on GMP-compliant environments.

🗄 Centralized Logs

Deskman Manager is available for advanced users, providing license management and a centralized, fully searcheable, log.
